Hurricane, WV 25526

Dear West Virginia Rural Water Association,

The Town of Tunnelton, as well as myself, would like to extend our gratitude for the assistance provided during our recent water problems. I would especially like to thank Rick Dennison and Lew Baker for their ongoing help and support.

Mr. Baker has worked with us to attempt to determine the life expectancy of the well and also to explore the possibility of drilling new ones. Recently we have contacted Mr. Baker concerning the possible use of one of WVRWA's mobile treatment plants and he was very helpful in everything we have asked.

Rick Dennison has also been very helpful even before the water crisis. All of Mr. Dennison's knowledge, as well as, the manual work he was able to perform has been very beneficial to us. Mr. Dennison was here for virtually the entire time that the two inch temporary line was installed and even afterward when we utilized his services to turn water off to our customers in order to fill our tanks.

The most important service that has been provided is that of moral support through a very difficult situation. I do not believe that we could have done this without the help of your organization. We appreciate very much the assistance that WVRWA has provided us with and we know that anytime we have a question or problem there will always be someone in your organization that is willing to help.

We would also like to extend our appreciation and thanks to Jeff Martin who assisted in installing a new pump in our wastewater lift station. Once again thank you from everyone at the Town of Tunnelton to everyone at West Virginia Rural Water.

Sincerely yours,

Julia Bolyard
Mayor- Town of Tunnelton
